1. *Example:* “If a rectangle has a length of 8 cm and a width of 3 cm, what is its perimeter?” While straightforward, the question can catch off-guard those who confuse perimeter with area.
2. Questions may also involve interpreting bar graphs or solving word problems that require translating text into mathematical operations.

Why Do Adults Struggle with These Questions?

1. **Forgetting foundational knowledge:** Without continual use, many facts and skills learned in elementary school fade from active memory.
2. **Overthinking simple questions:** Adults sometimes expect questions to be more complex than they are, leading to confusion or second-guessing.
3. **Changes in educational standards:** Curriculum updates and differences in teaching methods mean adults may not have learned the exact content tested.
4. **Nervousness and time pressure:** The quiz format often includes a timer, which can impair recall and increase stress.

This phenomenon highlights the importance of lifelong learning and the value of revisiting foundational subjects.

Comparing Adult and 5th Grader Performance

Interestingly, many episodes of the TV show demonstrate that 5th graders often outperform adults on these questions. This is largely due to the recency effect, where children have recently learned the material and are actively using it in school. Adults, on the other hand, may have only peripheral or
